Subject RE: sampling schedule next week

Hi Tom - I was just talking to my field geologist and he thinks he will be able to get all the sampling done Monday, and just do the concrete patching on Tuesday. I think you should have your field person out there no later than early afternoon, to collect your splits. The "purposive" sample locations are your best bets for potential hits. I told Mike to do those last.

Sharon

Subject: sampling schedule next week

Sharon,

we will be collecting 3 surface soil split-samples from 2 locations next week. Since we may not need to be there for the entire duration of sampling, I am planning to send our guy to the site on Tuesday. I want to collect samples from locations that are not close to each other and will likely have hits. Can this be done on Tuesday?

Tom
